FullStack store

- **Chai**
  https://tea-store-ten.vercel.app/

The store, built on Next.js, utilizes Redux Toolkit and React Query for state management and caching. Axios is used for server communication, while Formik handles form management. Components are styled using styled-components. The admin panel is written in React with react-hook-form. The server-side, based on Nest.js, interacts with the Prisma database.

Frontend store

- **Stuff**
  https://store-seven-mu.vercel.app/

The frontend part of the store was developed using React, incorporating state management tools such as Redux Toolkit. Redux Toolkit Query was used for handling asynchronous server requests and data management in Redux.
